

WE CLAIM:

1. A notebook computer protection device,
comprising:

a reinforced body member having a sleeve adapted
5 to both receive and secure a notebook computer
therewithin, the body member having at least one
opening permitting access to a lateral portion of the
received notebook computer while secured therewithin.

2. The notebook computer protection device as
10 specified in Claim 1 wherein the body member has a
plurality of openings permitting access to a plurality
of lateral portions of the notebook computer while
secured therewithin.

3. The notebook computer protection device as
15 specified in Claim 2 wherein the body member has a
plurality of extensions defining the openings
therebetween.

4. The notebook computer protection device as
specified in Claim 1 wherein the body member has a
20 port coupled to the sleeve and is adapted to receive
the notebook computer and also to permit retrieval
therethrough.

5. The notebook computer protection device as
specified in Claim 4 further comprising a retractable

handle disposed across the port and adapted to permit manipulation of the body member when the notebook computer is received therein.

6. The notebook computer protection device as
5 specified in Claim 5 wherein the handle is pivotably retractable.

7. The notebook computer protection device as specified in Claim 5 wherein the handle curves outwardly from the body member.

10 8. The notebook computer protection device as specified in Claim 1 wherein the body member further includes a security device adapted to provide an alert when the notebook computer is removed from the body member.

15 9. The notebook computer protection device as specified in Claim 1 wherein the body member is comprised of a translucent material permitting a visual inspection of substantially all of the notebook computer when received therewithin.

20 10. The notebook computer protection device as specified in Claim 1 wherein the body member further comprises a resilient member disposed proximate the sleeve and adapted to securely cushion the notebook computer when received therewithin.

11. In combination:

a notebook computer; and

a reinforced body member having a sleeve adapted to both receive and secure a notebook computer

5 therewithin, the body member having at least one opening permitting access to a lateral portion of the received notebook computer while secured therewithin.

12. The combination as specified in Claim 11 wherein

10 the body member has a plurality of openings permitting access to a plurality of lateral portions of the notebook computer while secured therewithin.

13. The combination as specified in Claim 12 wherein

the body member has a plurality of extensions defining
15 the openings therebetween.

14. The combination as specified in Claim 11 wherein
the body member has a port coupled to the sleeve and
is adapted to receive the notebook computer and also
to permit retrieval therethrough.

20 15. The combination as specified in Claim 14 further
comprising a retractable handle disposed across the
port and adapted to permit manipulation of the body
member when the notebook computer is received therein.

16. The combination as specified in Claim 15 wherein the handle is pivotably retractable.
17. The combination as specified in Claim 15 wherein the handle curves outwardly from the body member.
- 5 18. The combination as specified in Claim 11 wherein the body member further includes a security device adapted to provide an alert when the notebook computer is removed from the body member.
- 10 19. The combination as specified in Claim 11 wherein the body member is comprised of a translucent material permitting a visual inspection of substantially all of the notebook computer when received therewithin.
- 15 20. The combination as specified in Claim 11 wherein the body member further comprises a resilient member disposed proximate the sleeve and adapted to securely cushion the notebook computer when received therewithin.
